Today's Agenda

- A brief explanation of clinical trials
- Dr. Del Rivero presentation
- Question and Answer with Dr. Del Rivero

What are clinical trials?

Systematic and targeted research focused on safety and effectiveness of medical interventions.

Categorized into one of four phases

Phases of a Clinical Trial

Phase I: Small numbers; establish general safety, dosage, and administration

Phase II: Larger number of participants, establish effectiveness and safety for specific disease

Phase III: Large scale study; compare intervention with standard care; may look at varying dosage and administrations; can examine subgroups.

Phase IV: Examines effectiveness and safety in “real world” without experimental control; can find rare side effects and longterm impact.

Characteristics of Clinical Trials

- Methodological rigor
 - Random assignment
 - Double blind procedure
- Oversight, regulation, and monitoring
- Voluntary and informed patient consent
- Difficult, expensive, protracted, high failure rate

BENEFITS

- Access
- Contribution
- Compensation

RISKS

- Unknown effectiveness
 - Extra treatment burden
 - Fear adverse effects
 - Feeling exploited
- (recruitment challenge)

How to find a clinical trial

- From your physician
- Internet search tools – use filters to direct search
 - US gov't based clinical trials website. <https://clinicaltrials.gov>
 - NIH clinical trials database. <https://clinicalstudies.info.nih.gov>
 - Ancora tool - on Pheo Para Alliance website - <https://pheopara.org/education/clinical-trials>
